ST INTERNATIONAL CONFERENCE ON PUBLIC HEALTH IN AFRICA CPHIA2021

COVID-19 IN AFRICA: ONE YEAR LATER ADDIS ABABA, ETHIOPIA | 12–14 MAY 2021

The SARS-CoV-2 virus that causes the coronavirus disease (COVID-19) was first reported in December 2019 in China. It has infected over 19 million people and caused more than 700,000 deaths globally. The COVID-19 pandemic has negatively impacted endemic disease programmes in Africa, including HIV/AIDS, tuberculosis, malaria, routine immunization, and non-communicable diseases. It has contributed to severe food insecurity, gender-based violence and economic slowdown as well as disruption of Africa's Continental Free Trade Area agreement. **The First International Conference on Public Health in Africa**, organized by Africa CDC, will focus on **COVID-19 in Africa: one year later** and allow a review of lessons learned from the COVID-19 pandemic and opportunities to re-evaluate the new normal in public health practice in Africa.
